Risk-Taking Test

SUMMARY	INTRO	GRAPHS	DETAILED RESULTS	AREAS OF CONCERN	ADVICE
---------	-------	--------	------------------	------------------	--------

Snapshot Report

Sensation-seeking

Sensation-seekers thrive on new, intense, and varied situations. Their personalities are associated with risk-taking because sensation-seeking drives individuals to seek out highly stimulating experiences, which often include risk. Sensation-seekers have strong positive reactions to intense stimuli. While there are many constructive aspects of this personality type, those with this trait often take more risks, are more impulsive, and become bored more easily. In certain ways, a sensation-seeking personality is an asset – such individuals thrive on stress, action, uncertainty, and challenge. In other ways, it is a liability – they may take outlandish risks. Low sensation-seekers, on the other hand, are reliable, can handle monotony, and prefer to sleep on their decisions. They avoid novel and stimulating experiences.

You scored in the mid-range in sensation-seeking. You need a moderate level of excitement and stimulation – not too little, not too much. You could probably handle both new situations and monotony, although neither extreme is ideal for you. Your moderate need for stimulation makes you a versatile employee.

Want to learn more?

Would you like to learn more about your level of comfort with risk? The complete results for this test provide you with 6 subscores. For example, you scored 62 on the Comfort with Ambiguity scale. Find out what this means and how you scored on the other subscales by ordering your full test report.
